PROFESSIONAL SUMMARY

Senior Data Engineer with 5+ years of experience building scalable data platforms, cloud-native ETL/ELT pipelines, and analytics solutions across fintech, consulting, and digital platforms. Experienced in designing production-grade data systems using Python, SQL, Airflow, PostgreSQL, BigQuery, Snowflake, AWS, and Google Cloud Platform (GCP). Specialized in building scalable ETL/ELT pipelines, optimizing cloud data infrastructure, and improving data reliability for high-volume production systems. Strong expertise in data modeling, orchestration, cloud infrastructure, analytics engineering, and operational monitoring for high-availability systems.

TECHNICAL SKILLS

Data Engineering & Orchestration

Python, SQL, Apache Airflow, ETL/ELT Pipelines, Workflow Automation, Data Modeling, Data Warehousing, Data Validation, Data Quality Monitoring

Cloud & Infrastructure

Google Cloud Platform (BigQuery, Cloud Functions, Cloud Storage), AWS (S3, Lambda, Glue, Athena), Snowflake, PostgreSQL

Analytics & Visualization

Power BI, Looker Studio, Excel, Advanced SQL, Business Intelligence, Dashboarding, Reporting

Big Data & Processing

Apache Spark, Scala, Batch Processing, Streaming Pipelines

Development & Tools

Git, GitHub, Docker, REST APIs, Async Processing

Core Competencies

Scalable Data Systems • Pipeline Optimization • Data Governance • Performance Tuning • Stakeholder Collaboration • Problem Solving • Cross-Functional Communication

WORK EXPERIENCE

Senior Data Engineer | 10Alytics

March 2026 - Present

- Built and optimized production-grade streaming data pipelines for FDIC-regulated banking systems processing 500K+ daily transactions with sub-5-minute latency and automated schema evolution.
- Designed scalable Airflow-orchestrated workflows and PostgreSQL infrastructure supporting 5,100+ concurrent users, improving query performance by 65%.
- Developed high-availability Python-based internal APIs and data services with async processing and robust error handling, maintaining 99.7% system uptime.
- Implemented automated monitoring, anomaly detection, and data quality validation processes that significantly improved reliability across upstream event streams.
- Collaborated with cross-functional engineering teams to improve platform observability, operational efficiency, and compliance readiness.
- Mentored aspiring data engineers on ETL design, cloud infrastructure, orchestration, and production engineering best practices.

Data Engineer Associate (Remote) | Eagles' Consulting

January 2025 - Present

- Designed and automated cloud-based ETL workflows that reduced manual operational workload by 30+ hours weekly.
- Built billing and cost-monitoring systems to track service performance, operational usage, and reporting metrics across multiple business units.
- Developed analytical dashboards and operational reports using SQL, Python, and BI tools to improve management visibility into business performance.
- Implemented structured data validation and monitoring pipelines that improved reporting accuracy and data reliability.
- Collaborated with technical and non-technical stakeholders to deliver scalable, data-driven solutions aligned with operational and strategic goals.
- Optimized reporting workflows and query performance, improving reporting turnaround time by 25–30%.

Data Engineer (Hybrid) | EVINCE

April 2023 – December 2024

- Built and maintained scalable ETL pipelines for customer analytics, revenue tracking, and operational reporting using Python and SQL.
- Automated ingestion, transformation, and storage workflows to support faster business intelligence and operational decision-making.
- Optimized database performance and query execution, reducing query runtime by 50% through indexing, tuning, and query optimization.
- Applied analytics and machine learning techniques to analyze customer behavior and purchasing patterns, supporting conversion optimization initiatives.
- Developed reporting workflows and dashboard datasets that improved reporting speed, consistency, and accessibility across teams.
- Collaborated with business stakeholders to deliver actionable insights on customer trends, revenue drivers, and operational performance metrics.

PROJECT WORK

Data Job Market Analysis

- Leveraged PostgreSQL and advanced SQL (CTEs, window functions, joins) to clean, transform, and analyze thousands of data job postings.
- Extracted insights on in-demand skills, salary trends, remote opportunities, and hiring patterns to highlight key industry dynamics.

Project Link: [Github](#)

SQL Sales Analysis

- Performed customer segmentation, cohort, and retention analyses in PostgreSQL to identify revenue drivers and churn trends.
- Delivered insights and strategies (VIP programs, re-engagement campaigns, personalized promotions) to optimize customer value and retention.

Project Link: [Github](#)

End-to-End Data Engineering Project: YouTube Data Analysis

- Built a complete pipeline for analyzing YouTube data, covering ingestion, cleaning, transformation, and analysis of structured/semi-structured data. Leveraged Python, SQL, and Google Cloud to optimize storage, automate workflows, and deliver insights on video categories and trending metrics.

Project Link: [Github](#)

Uber Data Analytics | End-to-End Data Engineering Project

- Built an end-to-end cloud-native ETL pipeline for Uber trip data using Python, Mage AI, Google Cloud Storage, and BigQuery, automating data ingestion, transformation, and analytics workflows.
- Designed dimensional data models and optimized SQL analytics pipelines to process large-scale transportation datasets and generate insights on revenue trends, passenger behavior, and operational performance.
- Developed interactive dashboards in Looker Studio to visualize trip patterns, payment distributions, and peak operational hours, enabling data-driven business reporting and decision-making.

Project Link: [Github](#)

Real-Time AWS & Snowflake Data Pipeline

- Built a real-time cloud-native data pipeline using AWS, Snowflake, Python, and ETL orchestration tools to automate ingestion, transformation, and analytics workflows for scalable data processing.
- Designed and optimized end-to-end data workflows with automated data validation, cloud storage integration, and SQL-based analytics to support high-performance reporting and real-time business insights.

Project Link: [Github](#)

Fitness Tracker Data Engineering Pipeline

- Built a scalable batch-processing pipeline using Apache Spark, Scala, Python, and Docker to process and analyze large-scale fitness tracker datasets for user activity and behavioral insights.
- Designed and optimized ETL workflows for ingesting, transforming, and analyzing fitness data, enabling reporting on calorie consumption, activity patterns, and user engagement metrics.

CERTIFICATIONS

- Microsoft Certified Fabric Data Engineer Associate (DP-700) — Microsoft (2026)
- Google Cloud Data Engineer Certification — Google (2023)
- Modernizing Data Lakes and Warehouses with GCP — Google (2024)
- Building Batch Data Pipelines on GCP — Google (2024)
- Smart Analytics, Machine Learning, and AI on GCP — Google (2024)
- ETL in Python and SQL — Coursera (2025)
- Big Data & Machine Learning Fundamentals — Google (2023)
- Introduction to Data Engineering & RDBMS — Coursera (2023)

Education

ALX (ExploreAI Academy) — Data Science (2023–2024)

Bowen University — LL.B (2017–2022)
