PROFESSIONAL SUMMARY

Data Engineer with 5+ years of experience designing, building, and optimizing scalable cloud-native data platforms and high-performance ETL/ELT pipelines across fintech, consulting, and enterprise environments. Proven track record of developing robust data pipelines processing over 500,000 daily transactions while improving data quality, platform reliability, scalability, and operational efficiency. Advanced expertise in Python, SQL, PostgreSQL, Airflow, AWS, Google Cloud Platform, and Snowflake. Experienced in data governance, pipeline monitoring, performance optimization, and cross-functional collaboration to deliver business-critical analytics and data solutions. Strong problem-solving ability with a passion for building reliable data systems that support data-driven decision-making.

TECHNICAL SKILLS

Programming Languages

Python, SQL, Scala

Data Engineering

ETL/ELT Pipelines, Data Modeling, Data Warehousing, Data Validation, Data Quality Monitoring, Workflow Automation, Batch Processing, Streaming Data Pipelines

Cloud Platforms:

Google Cloud Platform (BigQuery, Cloud Storage, Cloud Functions), AWS (S3, Lambda, Glue, Athena), Snowflake

Orchestration & Processing:

Apache Airflow, Apache Spark, Mage AI

Databases:

PostgreSQL, MySQL, BigQuery, Snowflake

Data Governance & Reliability:

Data Governance, Data Lineage, Data Quality Assurance, Monitoring, Observability, Performance Optimization

Development Tools:

Git, GitHub, Docker, REST APIs

Data Quality & Monitoring:

Data Validation, Data Quality Testing, Monitoring, Observability, Anomaly Detection

Machine Learning:

Predictive Analytics, Feature Engineering, ML Data Preparation

Core Competencies

Data Engineering • ETL/ELT Development • Data Governance • Data Pipeline Optimization • Data Quality & Monitoring • Cloud Data Platforms • Cross-Functional Collaboration • SQL Performance Tuning • Problem Solving • Data Platform Scalability

WORK EXPERIENCE

Senior Data Engineer | 10Alytics

March 2026 - Present

- Built and maintained production-grade streaming data pipelines processing over 500,000 daily banking transactions with sub-5-minute latency, ensuring data availability, accuracy, and regulatory compliance.
- Optimized large-scale data platforms through automated schema evolution, monitoring frameworks, and data quality controls, preventing more than 40 compliance-related data issues.
- Designed and maintained Airflow-orchestrated ETL workflows and scalable PostgreSQL infrastructure supporting over 5,100 concurrent users while improving query performance by 65%.
- Developed Python-based data services and APIs with asynchronous processing and fault-tolerant architecture, achieving 99.7% service availability.
- Implemented automated data validation, anomaly detection, and monitoring processes to improve data accuracy, observability, and operational reliability.
- Collaborated with engineering, analytics, product, and business teams to understand data requirements and deliver scalable data solutions.
- Investigated and resolved complex data issues across distributed systems, reducing recurring incidents through proactive monitoring and root-cause analysis.

Data Engineer Associate (Remote) | Eagles' Consulting

January 2025 – February 2026

- Designed and automated cloud-based ETL pipelines using Python and SQL, reducing manual operational effort by more than 30 hours weekly.
- Built billing analytics and cost-monitoring systems that improved visibility into service usage, platform performance, and operational efficiency.
- Developed scalable reporting datasets, dashboards, and business intelligence solutions to support data-driven decision-making.
- Implemented automated data validation and quality assurance processes that improved reporting accuracy and consistency.
- Partnered with technical and non-technical stakeholders to gather requirements and deliver reliable data solutions aligned with business objectives.
- Optimized SQL queries and reporting workflows, reducing report generation time by up to 30%.

Data Engineer (Hybrid) | EVINCE

April 2023 – December 2024

- Built and optimized scalable ETL pipelines using Python and SQL, improving data availability and reducing manual reporting effort across business units.
- Automated ingestion and transformation workflows that accelerated reporting delivery and improved operational decision-making.
- Optimized database performance and query execution, reducing query runtime by 50% through indexing, tuning, and query optimization.
- Applied analytics and machine learning techniques to analyze customer behavior and purchasing patterns, supporting conversion optimization initiatives.
- Developed reporting workflows and dashboard datasets that improved reporting speed, consistency, and accessibility across teams.
- Collaborated with business stakeholders to deliver actionable insights on customer trends, revenue drivers, and operational performance metrics.

PROJECT WORK

Real-Time Financial Data Pipeline (AWS, Snowflake)

- Built a real-time cloud-native data pipeline using AWS, Snowflake, Python, and ETL orchestration tools to automate ingestion, transformation, and analytics workflows for scalable data processing.
- Designed and optimized end-to-end data workflows with automated data validation, cloud storage integration, and SQL-based analytics to support high-performance reporting and real-time business insights.

Project Link: [Github](#)

Healthcare Claims Analytics Platform

- Built an end-to-end healthcare claims analytics platform using Python, PostgreSQL, dbt, Docker, and Streamlit, processing 15,000+ synthetic insurance claims through a Bronze-Silver-Gold architecture.
- Developed automated ETL pipelines, data quality tests (16 dbt validations), analytical marts, and executive dashboards that tracked claim approvals, provider performance, insurance utilization, and healthcare costs across multiple cities.

Project Link: [Github](#)

Uber Data Analytics | End-to-End Data Engineering Project

- Built an end-to-end cloud-native ETL pipeline for Uber trip data using Python, Mage AI, Google Cloud Storage, and BigQuery, automating data ingestion, transformation, and analytics workflows.
- Designed dimensional data models and optimized SQL analytics pipelines to process large-scale transportation datasets and generate insights on revenue trends, passenger behavior, and operational performance.
- Developed interactive dashboards in Looker Studio to visualize trip patterns, payment distributions, and peak operational hours, enabling data-driven business reporting and decision-making.

Project Link: [Github](#)

End-to-End Data Engineering Project: YouTube Data Analysis

- Built a complete pipeline for analyzing YouTube data, covering ingestion, cleaning, transformation, and analysis of structured/semi-structured data. Leveraged Python, SQL, and Google Cloud to optimize storage, automate workflows, and deliver insights on video categories and trending metrics.

Project Link: [Github](#)

SQL Sales Analysis

- Performed customer segmentation, cohort, and retention analyses in PostgreSQL to identify revenue drivers and churn trends.
- Delivered insights and strategies (VIP programs, re-engagement campaigns, personalized promotions) to optimize customer value and retention.

Project Link: [Github](#)

Data Job Market Analysis

- Leveraged PostgreSQL and advanced SQL (CTEs, window functions, joins) to clean, transform, and analyze thousands of data job postings.
- Extracted insights on in-demand skills, salary trends, remote opportunities, and hiring patterns to highlight key industry dynamics.

Project Link: [Github](#)

SwiftRide Logistics Data Platform (PostgreSQL)

- Designed and implemented a multi-schema PostgreSQL database supporting logistics operations, fleet management, warehouse management, and finance workflows.
- Built relational models with constraints, indexing, referential integrity, and optimized SQL queries for reporting and operational analytics.
- Developed analytical SQL solutions using joins, CTEs, window functions, and aggregations to generate business insights and operational reports.

CERTIFICATIONS

- Microsoft Certified Fabric Data Engineer Associate (DP-700) — Microsoft (2026)
- Google Cloud Data Engineer Certification — Google (2023)
- Modernizing Data Lakes and Warehouses with GCP — Google (2024)
- Building Batch Data Pipelines on GCP — Google (2024)
- Smart Analytics, Machine Learning, and AI on GCP — Google (2024)
- ETL in Python and SQL — Coursera (2025)
- Big Data & Machine Learning Fundamentals — Google (2023)
- Introduction to Data Engineering & RDBMS — Coursera (2023)

Education

ALX (ExploreAI Academy) — Data Science (2023–2024)

Bowen University — LL.B (2017–2022)
